SQL
Good communication

Projects

Food Ordering System
Food ordering system developed using MEAN full stack it helps the restaurant to provide better services. Customers can easily browse menus and place order and in the same time they can even track the order.

Detecting fruits and vegetables quality and finding the nutrients using image processing
Healthy Fruits and vegetables consumptions is very important for an individual. This project aims to detect the damages inside them by making sure that it reduces the manual work. Choosing a CNN model and training large dataset with SGD techniques to increase accuracy and efficiency in the results is the important step.

Certificates
